

PRODUCT INFORMATION: MOBi-lert PTX

MOBi-lert PTX 7000 (PTX) are Personal Transmitters worn by every person on board a vessel. They are included with every MOBi-lert system.

MOBi-lert systems are designed to provide an immediate alert in the event of a man over board (MOB) emergency. Users simply attach the waterproof PTX to their clothes or body, using the supplied lanyard or clip.

Each PTX is continually transmitting signals to a central receiver installed on board the wearer's vessel. Any break in transmission between a wearer's PTX and the vessel, caused by immersion in sea water, will raise an alarm.

For systems with a MOBi-lert Console, individual PTX can be registered with the wearer's name - allowing immediate identification of a MOB in the event of an emergency.

PTX are available in a range of colours. They are small, lightweight and very easy to wear.

With rechargeable batteries that last up to three to four days between charges, PTX are hassle-free. A warning alarm sounds if PTX battery levels are low and in need of a recharge.

Simply store in the supplied Charger Pod when not in use - this storage solution also ensures that PTX remain charged at all times.

Because MOBi-lert systems cater for up to 18 people, PTX are also available for individual purchase.

Features

- 85 per cent recharged after 1.5 hours - suitable for use
- Ultrasonically sealed and waterproof to IP68
- Contactless induction charging
- Fully charged battery lasts up to three to four days
- LED shows PTX charge and status
- Small 70mm x 45mm (2.75in x 1.77in)
- Lightweight 46g (1.6oz)
- High impact polycarbonate casing
